**Samenvatting van GB1283267**

1283267 Cigarette lighters VAN POPPEL NV  
 GEB 18 June 1970 [24 June 1969] 29579/70

Heading F4F A cigarette lighter comprises a base member 1 for housing a fuel reservoir 21 and a flint holder 5, a head member 2 comprising a flame guard 33 and an ignition mechanism 6, 25 and an intermediate member 3 having the flint holder 5 formed integrally therewith and interconnecting the head and base members. The intermediate member 3 has a pilot section 12 with two depending spaced tongues 13, 14, at least one of which is resilient, provided at their free ends with outwardly extending dogs 15, 16 which engage in recesses formed adjacent ridges 17 and 18 provided on the inside wall of the sleeve 1. The top of the member 3 has two undercut lugs 29, 30, which engage beads 31, 32 provided on the flame guard, and also two webs 22 (23) journaled to receive a common shaft 24 for the spark wheel 25 and a closure cap 26. The head of the reservoir 21 projects through an aperture 4 in member 3, projections 34 formed on member 3 cooperating with stops 35 on the reservoir to prevent rotation of the latter. The member 3 is preferably formed from a resilient plastics material which may be injection moulded.
